

SOLARIUM

Certainly 0.3

The SOLARIUM range offers Wolff System tanning lamps that meet the European Directive DIN EN 60335-2-27. This means that the SOLARIUM range provides the maximum output of erythema irradiance (0.3 W/m²) in the tanning unit that is specified in the EU Directive. Less irradiance does not mean less tanning performance! The clever design of the SOLARIUM series provides convincing tanning results with maximum output while being fully compliant the EU legislation.

SOLARIUM lamp range including SOLARIUM RED and GOLD

BELLARIUM

Luxury for the skin

The BELLARIUM lamp range of Wolff System ensures pure joie de vivre. Designed with optimal phosphor blends and produced with high-quality glass the BELLARIUM range offers the highest level of tanning performance available in the market. A luxury that promises satisfied tanning customers.

BELLARIUM's outstanding "Made in Germany" quality guarantees efficiency and cost effectiveness in the tanning salon.

BELLARIUM lamp range including BELLARIUM RED and GOLD

RED

Red light therapy (RLT) is a powerful tool for enhancing your tanning results and achieving a deeper, more even tan. By stimulating melanin production, improving skin texture and tone, and promoting a deeper, longer-lasting tan, red light therapy can help you get the most out of your time in a tanning bed.

The SOLARIUM and BELLARIUM red range offers both, benefits for skin and body. The main benefit for the skin is helping the skin perform at its optimal health and function. Apart from the many skin health and aesthetic benefits, red light therapy can impact the body as well and improve your overall performance.

Red light therapy

Red light therapy is promoted as a treatment for some common skin conditions and improves:

- wound healing, scars and acne
- skin and hair psoriasis, rosacea and eczema
- hair growth at androgenic alopecia
- sun-damaged skin and facial texture

Red light also effectively reduces:

- stretch marks
- wrinkles and fine lines
- age spots

Red light works by acting on the "power plant" in your body's cells called mitochondria. With more energy, other cells

can do their work more efficiently, such as repairing skin, boosting new cell growth and enhancing skin rejuvenation. More specifically, certain cells absorb light wave-lengths and are stimulated to work.

Red light exposure promotes skin health to:

- stimulate collagen production which gives skin its structure, strength and elasticity
- increase fibroblast production which makes collagen. Collagen is a component of connective tissue that builds skin
- Increase blood circulation to the tissue
- reduce inflammation in cells

sun for a better life

GOLD

The SOLARIUM and BELLARIUM gold range provide the highest tanning standards. In detail, this product range was designed to ensure:

- more tanning power versus any lamp model with conventional phosphors
- superior phosphor mixes and lamp technology
- improved tanning result given by an optimized lamp design
- faster pigmentation of existing keratin pigments, quicker and longer lasting tanned skin
- improved life span of the lamps up to 1.000 hours of operation
- proven and guaranteed tanning results

Technical changes and typographical errors reserved. The lamps are intended for sun-tanning purposes only and shall not be used in any other application.

The positive effects of the sun made accessible all year round

Right from the start, in the 1970s, the aim of lamp development at Wolff System was to strengthen the human organism and to tan the skin in an individually dosed manner without the risk of a harmful overdose.

The UV spectrum of the sun served as a model for the development, and it has been adapted to provide both: instant tanning through pigment darkening and long-lasting tanning through regeneration of the pigment melanin.
